PRECISION AIRCONVEY GREEN POLICY STATEMENT

Precision AirConvey is committed to the development of products that will enable our customers to reduce their environmental footprint. Our products enable our customers to reduce their labor, energy and waste output.

It is also our corporate goal to minimize the environmental impact of our company operations through the continual improvement of waste reduction and use of sustainable materials and practices.

Dunnage:

PAC is able to re-use a very high percentage of all dunnage (skids, containers, cardboard, packing materials) received on our purchased inbound products for our sold outbound products. Purchases of dunnage materials is less than 25% of our total need by reusing these materials.

HVAC:

All heating and cooling is programmable to assure that comfortable temperatures are maintained only in core working hours allowing greatly reduced energy needs in the evenings/nights and weekends.

Lighting:

In 2018, Precision AirConvey retrofitted our facility with LED lighting replacing fluorescent and halogen bulbs. This change has allowed for a 40% reduction in lighting costs and additionally the LED lights are 2 to 3 times the life of traditional bulbs. The majority of lighting at PAC is on motion sensing adding to the savings.

Recycling:

Throughout the office and production areas, containers are located throughout to assure that all products deemed as recyclable make it to the correct destination. For PAC that includes paper, plastic, metal, electronics and glass.
